

Web Programming

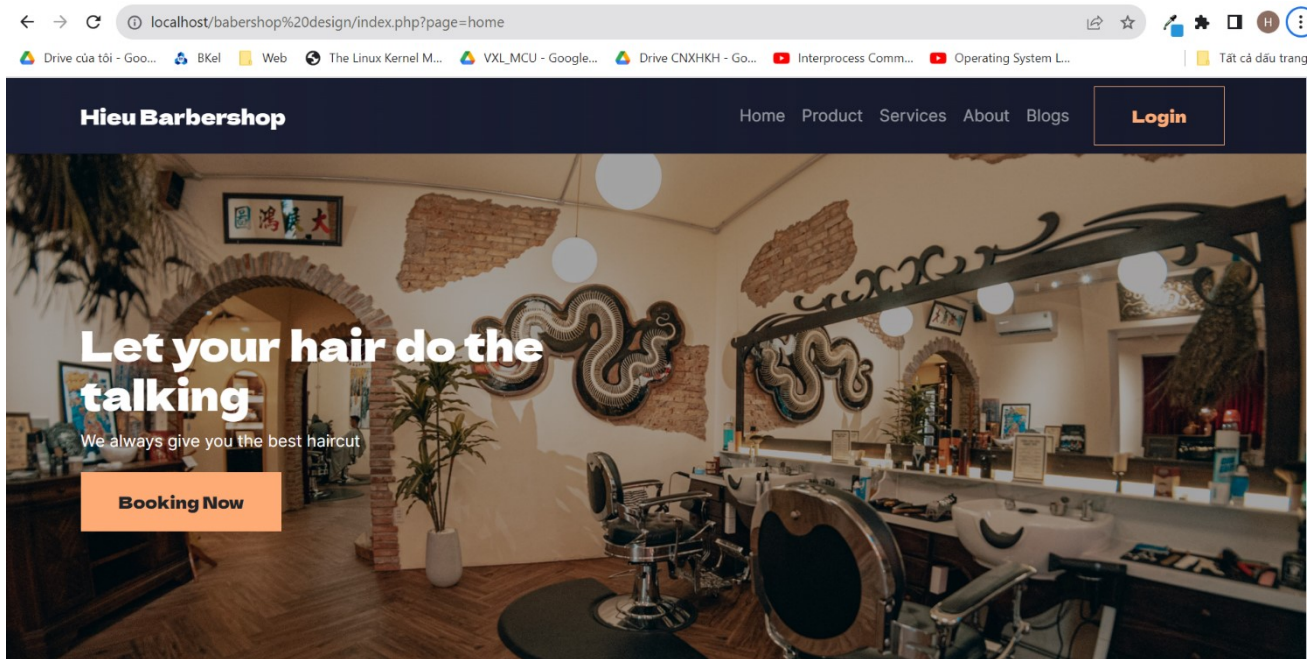

REPORT LAB 2.1 Create URLs with PHP

Instructor: Nguyễn Đức Thái
Name: Hứa Vũ Minh Hiếu
ID: 2052990

Ho Chi Minh City, Nov 9, 2023

I. Build the navigation bar and the cover of webpages.

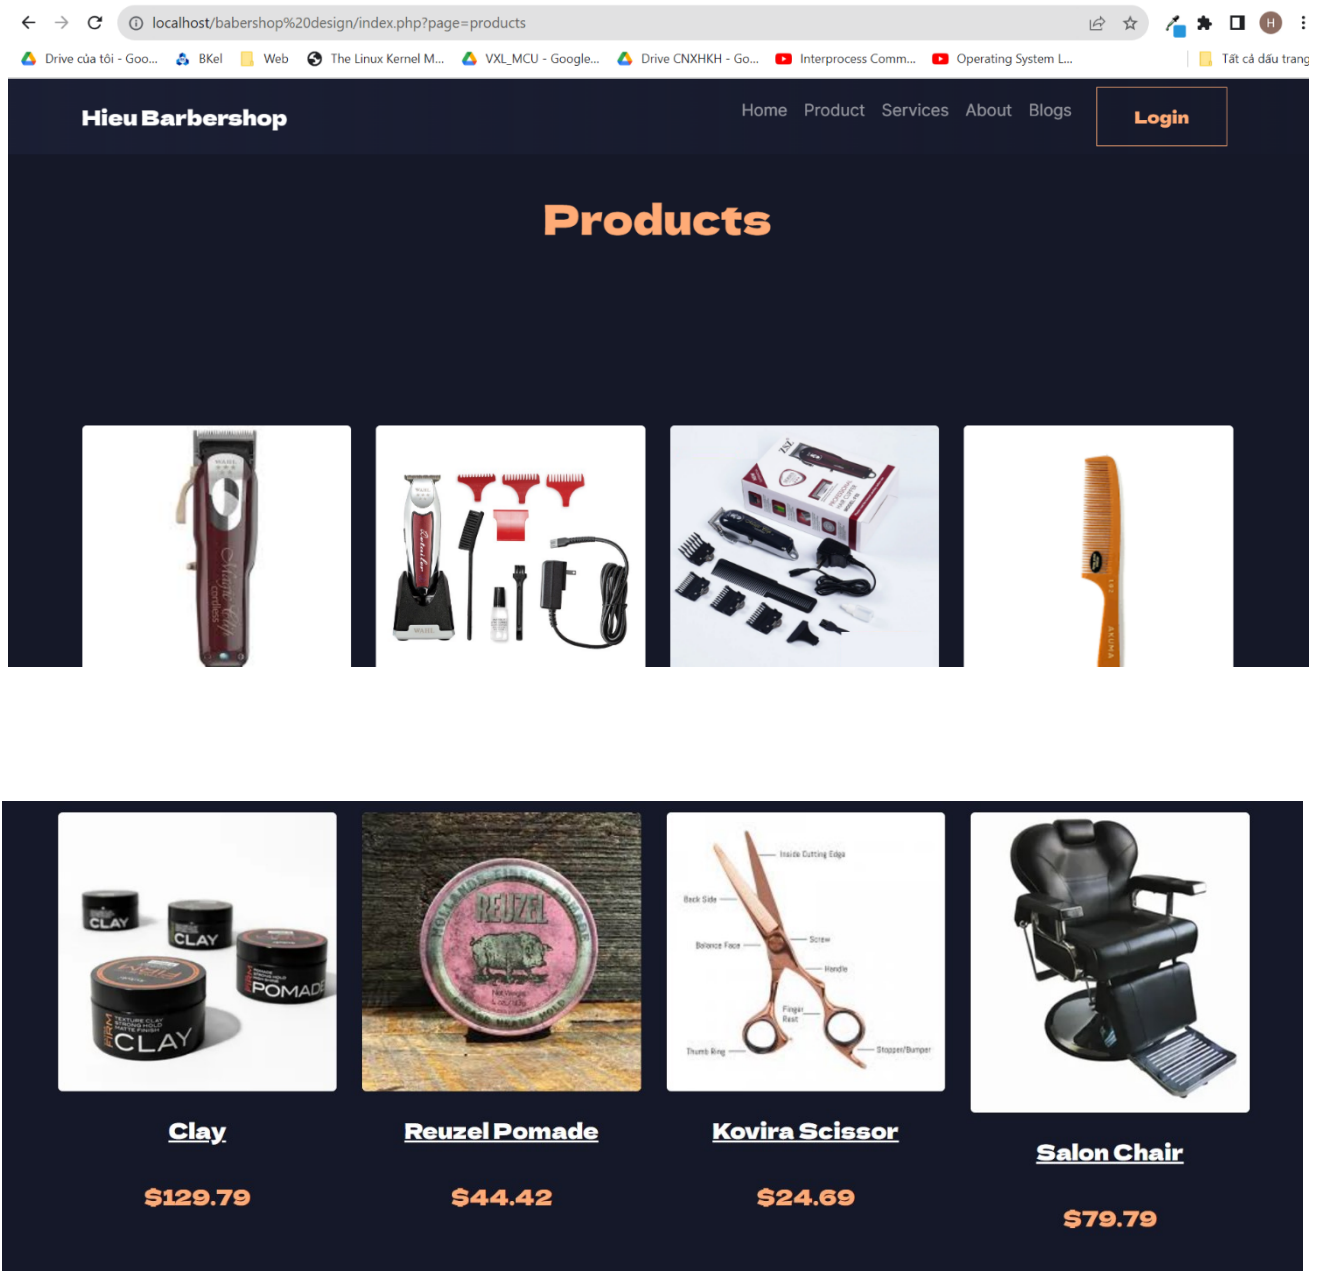

Being an engineer student, but I also have a passion for doing things that make people look good. Especially, the job related to hair that is a barber. That is the reason why I built this website Hieu Barbershop to satisfy two passions at once.

Home.php file:

https://github.com/minhhieu181002/Web_Programming_Hieu-Barbershop/blob/main/home.php

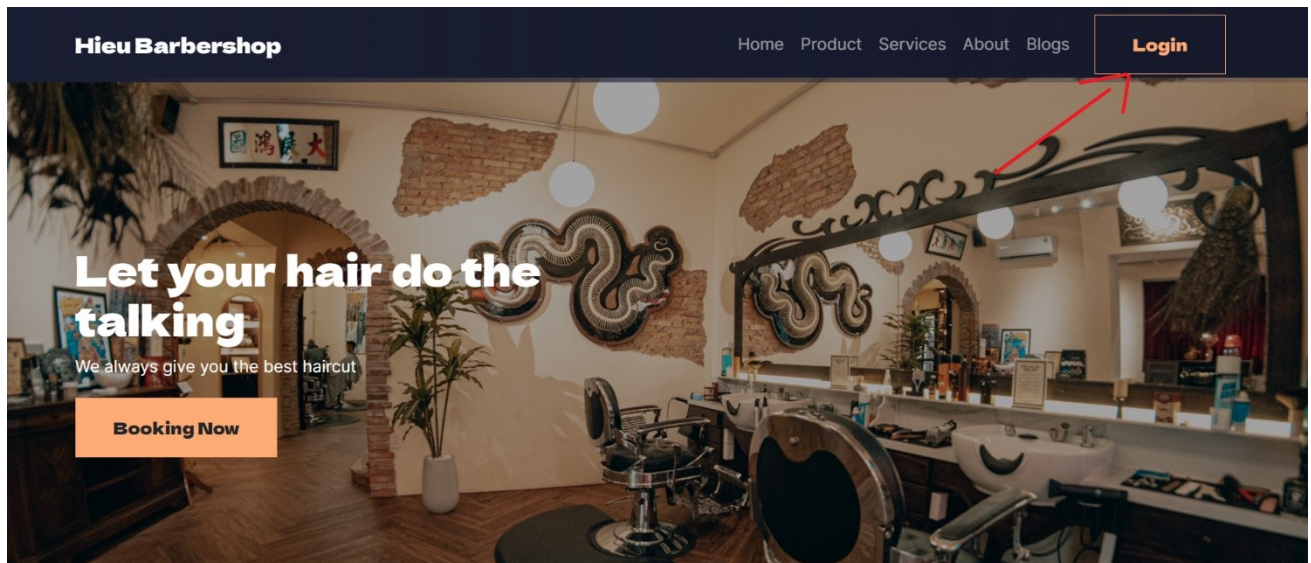

II. Build product layout.

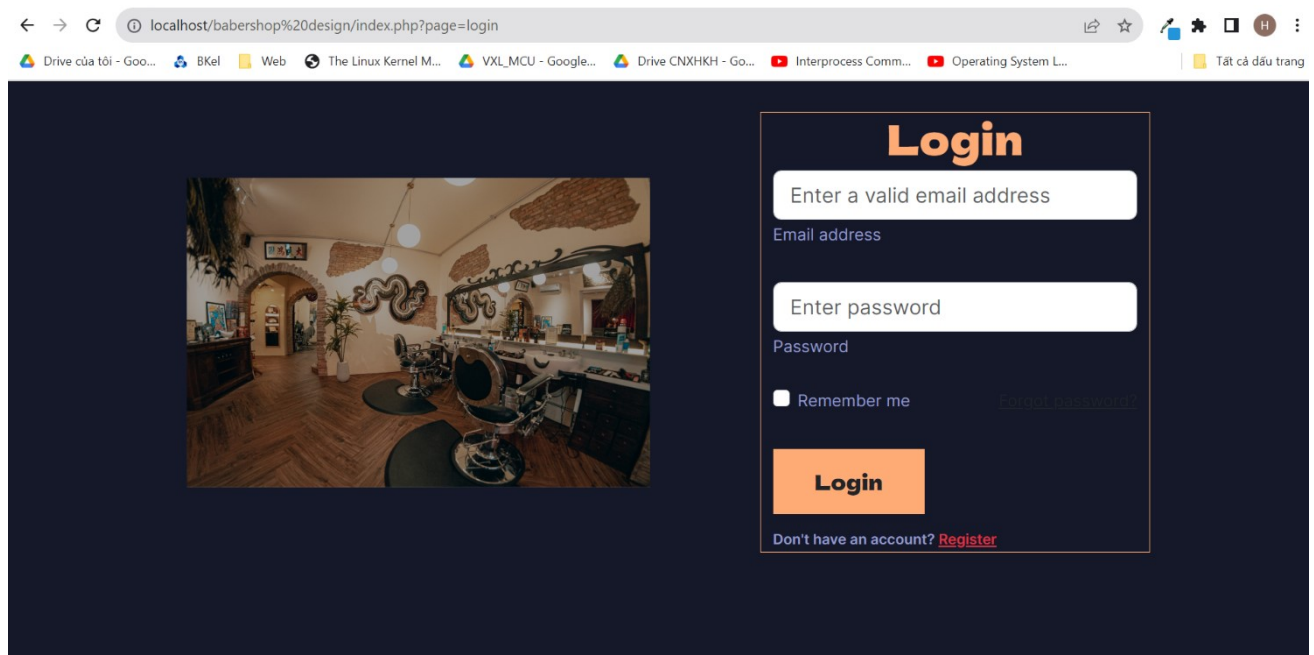

products.php file:

https://github.com/minhhieu181002/Web_Programming_Hieu-Barbershop/blob/main/products.php

III. Build the login form.

When users press the button login. The website will direct to login form showing as below.

I put the source code to github to easily update the code when building the website.

login.php file:

https://github.com/minhhieu181002/Web_Programming_Hieu-Barbershop/blob/main/login.php

Source code of website:

https://github.com/minhhieu181002/Web_Programming_Hieu-Barbershop
