# Web Programming

REPORT
LAB 2.2 Work with DB using PHP and MySQLi (MariaDB)

Instructor: Nguyễn Đức Thái

Name: Hứa Vũ Minh Hiếu

**ID:**   2052990

Ho Chi Minh City, Nov 9, 2023

I.   Create a database.

Firstly, I create a database named `onlinestore` that contain `products` table and `users` table.

II.   Insert information to database.

With products I create a new form that only admin can see and can insert new item to database.

The `Insert_items function` is only visible for Admin. With normal users, they will not see it.

`products.php file:`
https://github.com/minhhieu181002/Web_Programming_Hieu-Barbershop/blob/main/products.php

When the administrator fills in the information of the product. The information will be inserted into the `products` table.

With the users I create a sign-up form for people who have not registered and do not have an account and when user sign up the users'information will be inserted to `users` table.

As you can see, the users' information has been inserted to `users` table and the password of users'account is encrypted.
